8 *Attorneys for Plaintiff State of California*

9
10 IN THE UNITED STATES DISTRICT COURT
11 FOR THE NORTHERN DISTRICT OF CALIFORNIA

12
13 **STATE OF CALIFORNIA**, by and through
14 **XAVIER BECERRA, ATTORNEY
GENERAL,**
15
16 Plaintiff,

17 **v.**

18 **UNITED STATES BUREAU OF LAND
MANAGEMENT; JOSEPH BALASH,**
Assistant Secretary for Land and Minerals
19 Management, United States Department of the
Interior; and **RYAN ZINKE**, Secretary of the
20 Interior,
21 Defendants.

Case No.

**COMPLAINT FOR DECLARATORY
AND INJUNCTIVE RELIEF**

(Administrative Procedure Act,
5 U.S.C. § 551 *et seq.*)

22 **INTRODUCTION**

23 1. Plaintiff State of California, by and through Xavier Becerra, Attorney General
24 (“Plaintiff” or “California”) brings this action to challenge the decision by the U.S. Bureau of
25 Land Management, *et al.* (“BLM” or “Defendants”) to repeal its 2015 regulations governing the
26 practice of hydraulic fracturing on federal and Indian lands (the “Fracking Rule”). The Fracking
27 Rule filled a rapidly expanding regulatory gap that resulted from BLM’s failure to address the
28 significant public health and environmental consequences stemming from hydraulic fracturing, a

1 practice that has dramatically increased in recent years in the development of oil and gas
2 resources. By repealing the Fracking Rule in its entirety, Defendants have tossed aside the public
3 interest in ensuring that fossil fuel development is conducted in an environmentally sound and
4 safe manner in service of what their own data shows is a negligible increase in oil and gas
5 operators' profits. Their action is devoid of any reasoned analysis, contravenes BLM's statutory
6 mandates, and ignores significant environmental consequences, in violation of the Administrative
7 Procedure Act ("APA"), several federal land management statutes, and the National
8 Environmental Policy Act ("NEPA").

9 2. BLM, a division of the U.S. Department of the Interior ("DOI"), finalized the "Oil
10 and Gas; Hydraulic Fracturing on Federal and Indian Lands" rule on March 29, 2015, after
11 conducting a multi-year stakeholder process and reviewing over a million public comments. 80
12 Fed. Reg. 16,128 (Mar. 29, 2015). The primary goals of the Fracking Rule were to ensure that oil
13 and gas wells subject to the extreme pressures of hydraulic fracturing were properly constructed
14 to protect underground drinking water aquifers, to make certain that the high volume of fracking
15 and drilling fluids that flow back to the surface from each fracked well were managed in an
16 environmentally responsible way, and to provide public disclosure of the chemicals used in
17 hydraulic fracturing fluids. *Id.* As BLM modestly stated at that time, the Fracking Rule "serves
18 as a much-needed complement to existing regulations designed to ensure the environmentally
19 responsible development of oil and gas resources on Federal and Indian lands, which were
20 finalized nearly thirty years ago, in light of the increasing use and complexity of hydraulic
21 fracturing coupled with advanced horizontal drilling technology." *Id.*

22 3. On March 28, 2017, President Donald Trump issued Executive Order 13783
23 entitled "Promoting Energy Independence and Economic Growth." 82 Fed. Reg. 16,093 (Mar.
24 31, 2017). Section 7 of that Executive Order, entitled "Review of Regulations Related to United
25 States Oil and Gas Development," specifically called on the Secretary of the Interior to review
26 and "as soon as practicable, suspend, revise, or rescind" the Fracking Rule. Just a day later,
27 Secretary of the Interior Ryan Zinke issued Secretarial Order 3349 entitled "American Energy
28 Independence," which claims to implement Executive Order 13783. Section 5(c)(i) of the

1 Secretarial Order provided, without any justification or analysis, that “BLM shall proceed
2 expeditiously with proposing to rescind” the Fracking Rule.

3 4. BLM issued its proposal to repeal the Fracking Rule on July 25, 2017. 82 Fed. Reg.
4 34,464 (Jul. 25, 2017) (“Proposed Repeal”). Citing to Executive Order 13783 and Secretarial
5 Order 3349, BLM claimed that the Fracking Rule “unnecessarily burdens industry with
6 compliance costs and information requirements that are duplicative of regulatory programs of
7 many states and some tribes.” *Id.* at 34,464-65. Along with the Proposed Repeal, BLM issued an
8 Environmental Assessment finding no significant environmental impacts associated with the
9 repeal of the Fracking Rule. BLM also issued a Regulatory Impact Analysis finding that
10 compliance with the Fracking Rule would cost approximately \$9,690 per well, or about 0.1-0.2%
11 of the cost of drilling a well (almost \$2,000 less than BLM’s cost estimate when it adopted the
12 Fracking Rule in 2015).

13 5. On December 29, 2017, BLM issued its final rule repealing the Fracking Rule. 82
14 Fed. Reg. 61,924 (Dec. 29, 2017) (“Final Repeal”). However, BLM’s action is arbitrary and
15 capricious because the agency attempts to rescind a duly promulgated rule without supplying a
16 reasoned basis for doing so. In particular, BLM failed to consider how the Final Repeal would
17 fulfill the important statutory mandates that the Fracking Rule was designed to address, failed to
18 explain why it reversed course based on the same information that it considered when it
19 formulated and promulgated the Rule just two years earlier, and offered a purported justification
20 for the Final Repeal that runs counter to the evidence before the agency. The Final Repeal also
21 violates Defendants’ statutory mandates to ensure the environmentally responsible development
22 of oil and gas resources on Federal and Indian lands, to fulfill its responsibility as trustee for
23 Indian lands, to protect the interests of the United States, and to safeguard the public welfare.
24 Furthermore, BLM’s perfunctory conclusion that the Final Repeal would result in no significant
25 environmental impacts violates the requirements of NEPA.

26 6. Accordingly, Plaintiff seeks a declaration that BLM’s action violated the APA,
27 NEPA, and multiple federal land management statutes, and an injunction requiring BLM to
28 vacate the Final Repeal and immediately reinstate all of the Fracking Rule’s provisions.

JURISDICTION AND VENUE

1
2 7. This Court has jurisdiction pursuant to 28 U.S.C. § 1331 (action arising under the
3 laws of the United States), 28 U.S.C. § 1361 (action to compel officer or agency to perform duty
4 owed to Plaintiff), and 5 U.S.C. §§ 701–706 (Administrative Procedure Act). An actual
5 controversy exists between the parties within the meaning of 28 U.S.C. § 2201(a), and this Court
6 may grant declaratory relief, injunctive relief, and other relief pursuant to 28 U.S.C. §§ 2201–
7 2202 and 5 U.S.C. §§ 705–706.

8 8. Venue is proper in this Court pursuant to 28 U.S.C. § 1391(e) because this is the
9 judicial district in which Plaintiff State of California resides, and this action seeks relief against
10 federal agencies and officials acting in their official capacities.

INTRADISTRICT ASSIGNMENT

11
12 9. Pursuant to Civil Local Rules 3-5(b) and 3-2(c), there is no basis for assignment of
13 this action to any particular location or division of this Court.

PARTIES

14
15 10. Plaintiff, STATE OF CALIFORNIA, brings this action by and through Attorney
16 General Xavier Becerra. The Attorney General is the chief law enforcement officer of the State
17 and has the authority to file civil actions in order to protect public rights and interests, including
18 actions to protect the natural resources of the State. Cal. Const., art. V, § 13; Cal. Gov. Code §§
19 12600-12612. This challenge is brought in part pursuant to the Attorney General’s independent
20 constitutional, statutory, and common law authority to represent the public interest.

21 11. California contains millions of acres of federal and tribal lands that are managed by
22 Defendants for energy production. In particular, BLM oversees 15 million acres of public lands
23 (about 15% of the Golden State’s total land mass) and 47 million acres of subsurface mineral
24 estate. These lands contain approximately 600 producing oil and gas leases covering more than
25 200,000 acres and 7,900 usable oil and gas wells. California is a leading state in terms of oil
26 extraction on public lands—producing about 15 million barrels annually—and also produces
27 approximately 7 billion cubic feet of natural gas annually. Considering onshore BLM-
28 administered leases nationwide, California is the third largest oil producer and the 13th highest

1 natural gas producing state. California also has the sixth highest number of fracked wells on
2 federal lands of any state.

3 12. California has a strong interest in preventing the adverse environmental and public
4 health impacts from the use of hydraulic fracturing on federal and Indian lands within the State.
5 In July 2015, the California Division of Oil, Gas, and Geothermal Resources (“DOGGR”)
6 certified an environmental impact report which found that well stimulation treatments including
7 hydraulic fracturing, depending on site-specific conditions and the intensity of well stimulation
8 activities, may have the potential to cause significant and unavoidable impacts to aesthetics, air
9 quality, biological resources (terrestrial environment), cultural resources, geology, soils and
10 mineral resources, greenhouse gas emissions, land use and planning, public and worker safety,
11 and transportation and traffic. For example, DOGGR’s analysis found that in Kern County, the
12 air emissions resulting from fracking operations “would occur at levels that could violate an air
13 quality standard or contribute substantially to an existing or projected air quality violation.”
14 DOGGR also found that “[w]ell-stimulation activities could affect endangered, rare, or threatened
15 species of fish, wildlife or plants,” and mitigation would be required to “avoid hazards such as
16 vehicle strikes, nest disturbance, entrapment, collision, electrocution, and hazardous materials.”
17 The California Council on Science and Technology also released a study in July 2015 which
18 identified several potential direct and indirect impacts from hydraulic fracturing, including the
19 release of volatile organic compounds (“VOCs”) from retention ponds and tanks used to store
20 well stimulation fluids, and induced seismicity (i.e., earthquakes) from the disposal of wastewater
21 in disposal wells.

22 13. In 2013, California enacted Senate Bill 4 (Pavley, Ch. 313. Stats. of 2013), which set
23 up a regulatory process for well stimulation treatments (including hydraulic fracturing) in
24 California, and required DOGGR to issue final regulations by July 1, 2015 governing these
25 activities. DOGGR’s regulations largely mirror those in the Fracking Rule, although the Fracking
26 Rule contains some provisions, such as the requirement to perform a mechanical integrity test
27 prior to recommencing a well stimulation treatment following an anomalous pressure increase,
28 that are not included in the DOGGR regulations. Moreover, because both state and federal

1 regulations apply on federal lands in California, the Fracking Rule provides an additional federal
2 layer of regulation and enforcement that addresses the environmental and public health concerns
3 related to hydraulic fracturing.

4 14. Moreover, the requirements in other states or tribes on many issues related to
5 hydraulic fracturing, including obtaining permits for hydraulic fracturing operations, mechanical
6 integrity testing, monitoring during fracking operations, well casing and cementing, baseline
7 water testing, and disclosure rules, are weaker or nonexistent. Given these varying requirements,
8 rescinding a rule that applies on federal and Indian lands nationwide creates an unlevel playing
9 field for oil and gas development. In addition, Plaintiff has an interest in the protection of federal
10 lands, which belong to the People.

11 15. By repealing the requirements of the Fracking Rule, Defendants' action will
12 adversely impact Plaintiff by increasing the potential for harmful environmental and public health
13 impacts from the use of hydraulic fracturing on federal and Indian lands, including increased air
14 pollution, impacts to surface and groundwater resources, and induced seismicity from the disposal
15 of wastewater in disposal wells from hydraulic fracturing operations. Consequently, Plaintiff has
16 suffered a legal wrong as a result of Defendants' action and has standing to bring this suit.

17 16. Defendant UNITED STATES BUREAU OF LAND MANAGEMENT is an agency
18 within the United States Department of the Interior that is charged with managing the federal
19 onshore oil and gas program and bears responsibility, in whole or in part, for the acts complained
20 of in this Complaint.

21 17. Defendant JOSEPH BALASH is the Assistant Secretary for Land and Minerals
22 Management, United States Department of the Interior, and is sued in his official capacity. Mr.
23 Balash signed the Final Repeal at issue and bears responsibility, in whole or in part, for the acts
24 complained of in this Complaint.

25 18. Defendant RYAN ZINKE is the Secretary of the United States Department of the
26 Interior, and is sued in his official capacity. Mr. Zinke has responsibility for implementing and
27 fulfilling the duties of the United States Department of the Interior, including the development of
28

1 fossil fuel resources on public lands, and bears responsibility, in whole or in part, for the acts
2 complained of in this Complaint.

3 **STATUTORY BACKGROUND**

4 **I. Federal Land Management Statutes.**

5 19. Defendants' duty to regulate hydraulic fracturing on federal and Indian lands is
6 established by several federal land management statutes. First, the Mineral Leasing Act of 1920,
7 30 U.S.C. § 181 *et seq.* (the "MLA"), directs BLM to "prescribe necessary and proper rules and
8 regulations" to ensure that operations on federal leases are conducted with "reasonable diligence,
9 skill and care," to protect "the interests of the United States," and to safeguard "the public
10 welfare" in federal mineral leases. 30 U.S.C. §§ 187, 189.

11 20. The Federal Land Policy and Management Act ("FLPMA"), 43 U.S.C. § 1701 *et seq.*,
12 requires BLM to regulate "the use, occupancy, and development of the public lands" under the
13 principles of "multiple use and sustained yield." *Id.* § 1732. Among other requirements, FLPMA
14 mandates that BLM manage public lands "in a manner that will protect the quality of ...
15 ecological, environmental, air and atmospheric, [and] water resource ... values," *id.* § 1701(a)(8),
16 and that BLM "by regulation or otherwise, take any action necessary to prevent unnecessary or
17 undue degradation of the lands." *Id.* § 1732(b).

18 21. Pursuant to the Indian Mineral Leasing Act of 1938, 25 U.S.C. §§ 396a–396g, and the
19 Indian Mineral Development Act of 1982, 25 U.S.C. §§ 2101–08, BLM regulates oil and gas
20 development on 56 million acres of Indian mineral estate held in trust by the federal government.
21 *See, e.g.*, 25 U.S.C. § 396d (oil and gas operations on Indian lands subject "to the rules and
22 regulations promulgated by the Secretary").

23 **II. National Environmental Policy Act.**

24 22. The National Environmental Policy Act, 42 U.S.C. § 4321 *et seq.*, is the "basic
25 national charter for the protection of the environment." 40 C.F.R. § 1500.1. The fundamental
26 purposes of the statute are to ensure that "environmental information is available to public
27 officials and citizens before decisions are made and before actions are taken," and that "public
28

1 officials make decisions that are based on understanding of environmental consequences, and take
2 actions that protect, restore, and enhance the environment.” *Id.* § 1500.1(b)-(c).

3 23. To achieve these purposes, NEPA requires the preparation of a detailed
4 environmental impact statement (“EIS”) for any “major federal action significantly affecting the
5 quality of the human environment.” 42 U.S.C. § 4332(2)(C). As a preliminary step, an agency
6 may first prepare an environmental assessment (“EA”) to determine whether the effects of an
7 action may be significant. 40 C.F.R. § 1508.9. If an agency decides not to prepare an EIS, it
8 must supply a “convincing statement of reasons” to explain why a project’s impacts are
9 insignificant. *Nat’l Parks & Conservation Ass’n v. Babbitt*, 241 F.3d 722, 730 (9th Cir. 2001).
10 However, an EIS must be prepared if “substantial questions are raised as to whether a project ...
11 may cause significant degradation of some human environmental factor.” *Idaho Sporting*
12 *Congress v. Thomas*, 137 F.3d 1146, 1149 (9th Cir. 1998).

13 24. To determine whether a proposed project may significantly affect the environment,
14 NEPA requires that both the context and the intensity of an action be considered. 40 C.F.R. §
15 1508.27. In evaluating the context, “[s]ignificance varies with the setting of the proposed action”
16 and includes an examination of “the affected region, the affected interests, and the locality.” *Id.* §
17 1508.27(a). Intensity “refers to the severity of impact,” and NEPA’s implementing regulations
18 list ten factors to be considered in evaluating intensity, including “[u]nique characteristics of the
19 geographic area such as proximity to ... ecologically critical areas,” “[t]he degree to which the
20 effects on the quality of the human environment are likely to be highly controversial,” “[t]he
21 degree to which the possible effects on the human environment are highly uncertain or involve
22 unique or unknown risks,” and “[t]he degree to which the action may establish a precedent for
23 future actions with significant effects or represents a decision in principle about a future
24 consideration.” *Id.* § 1508.27(b). The presence of just “one of these factors may be sufficient to
25 require the preparation of an EIS in appropriate circumstances.” *Ocean Advocates v. U.S. Army*
26 *Corps of Eng’rs*, 402 F.3d 846, 865 (9th Cir. 2005).

1 III. The Administrative Procedure Act.

2 25. The Administrative Procedure Act, 5 U.S.C. § 551 *et seq.*, governs the procedural
3 requirements for agency decision-making, including the agency rule making process. Under the
4 APA, a “reviewing court shall ... hold unlawful and set aside” agency action found to be
5 “arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law.” 5 U.S.C.
6 § 706. If an agency reverses course by suspending a fully-promulgated regulation, it is “obligated
7 to supply a reasoned analysis for the change.” *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State*
8 *Farm Mutual Automobile Ins. Co.*, 463 U.S. 29, 42 (1983). Further, an agency must show that
9 “there are good reasons” for the reversal. *F.C.C. v. Fox Television Stations, Inc.*, 556 U.S. 502,
10 515 (2009). An agency must “provide a more detailed justification than what would suffice for a
11 new policy created on a blank slate” when “its new policy rests upon factual findings that
12 contradict those which underlay its prior policy.” *Id.* Moreover, an agency cannot suspend a
13 validly promulgated rule without first “pursu[ing] available alternatives that might have corrected
14 the deficiencies in the program which the agency relied upon to justify the suspension.” *Public*
15 *Citizen v. Steed*, 733 F.2d 93, 103 (D.C. Cir. 1984).

16 FACTUAL AND PROCEDURAL BACKGROUND

17 26. In recent years, several areas of the United States have experienced a boom in oil and
18 gas production through the use of advanced well treatments such as fracking. Fracking is a
19 procedure by which oil and gas producers inject water, sand, and certain chemicals at high
20 pressure into tight-rock formations (typically shale) to create fissures in the rock and allow oil and
21 gas to escape for collection in a well. A typical fracking operation involves the underground
22 injection of hundreds of thousands to several million gallons of fluid. While most of the fluid is
23 water, an assortment of chemicals, some of which are known carcinogens or other types of toxins,
24 are added for different purposes such as lubrication of the fracture and minimization of corrosion.
25 Much of the fracturing fluid, along with subsurface fluids (which often contains hazardous heavy
26 metals and other contaminants from the shale formation), flows back to the surface and is
27 typically disposed of by subsequent injection into underground wells.

28

1 27. The rapid expansion of fracking nationwide has led to growing public concern about
2 the risks of water and air pollution, increased seismic activity, and a prolonged dependence on
3 fossil fuels. *See* 80 Fed. Reg. at 16,128, 16,182-83. For example, inadequate steel and cement
4 well casings that run through groundwater zones can break during fracking operations and allow
5 fracking fluids to escape. Air pollution concerns arise from the handling of the flow back fluids,
6 which if stored in open pits may allow for the evaporation of toxic chemicals. Lastly, some areas
7 of heavy fracking operations have seen a pronounced increase in the frequency of low-level
8 seismic events.

9 28. BLM is the agency responsible for overseeing oil and gas development on over 245
10 million acres of public lands and 700 million acres of subsurface mineral estate across the United
11 States. BLM has estimated that ninety percent of new wells drilled on federal lands are now
12 being stimulated using fracking. 80 Fed. Reg. at 16,131. The vast majority of fracking on federal
13 lands occurs in just nine states, including California. *Id.* at 16,187.

14 29. In response to increased concern about the public health and environmental impacts
15 of fracking, BLM began a rulemaking process in 2010 to provide additional regulatory oversight
16 over the practice and released its first proposed rule in 2012. 77 Fed. Reg. 27,691 (May 11,
17 2012). Following another comment period where it received over 1.35 million comments, *see* 78
18 Fed. Reg. 31,636 (May 24, 2013), BLM released its final Fracking Rule on March 26, 2015. 80
19 Fed. Reg. 16,128.

20 30. According to BLM, the Fracking Rule “serves as a much-needed complement to
21 existing regulations designed to ensure the environmentally responsible development of oil and
22 gas resources on Federal and Indian lands, which were finalized nearly thirty years ago, in light of
23 the increasing use and complexity of hydraulic fracturing coupled with advanced horizontal
24 drilling technology.” *Id.* The Fracking Rule “is more protective than the previous proposed rules
25 and current regulations,” “strengthens oversight and provides the public with more information
26 than is currently available, while recognizing state and tribal authorities and not imposing undue
27 delays, costs, and procedures on operators.” *Id.*

28

1 31. According to BLM, the primary goals of the Fracking Rule were to “ensure that wells
2 are properly constructed to protect water supplies, to make certain that the fluids that flow back to
3 the surface as a result of hydraulic fracturing operations are managed in an environmentally
4 responsible way, and to provide public disclosure of the chemicals used in hydraulic fracturing
5 fluids.” *Id.* The Fracking Rule requires operators to provide detailed information on designs,
6 plans, and geology before commencing fracking. It specifies performance and design standards
7 and requires monitoring and testing to ensure wellbore integrity. It fills a regulatory gap by
8 providing requirements for temporary storage of recovered fluids. And it requires post-operation
9 filing of information relating to the fracking operation, including public disclosure of fracking
10 fluids composition.

11 32. At the time it was issued, BLM stated that the Fracking Rule would provide
12 numerous public health and environmental benefits because it was more protective than existing
13 state and tribal regulations. For example, of the nine states where the majority of fracking on
14 federal land occurs, at least six did not require the use of tanks instead of pits for containing waste
15 fluids. *See* 80 Fed. Reg. at 16,162-63. BLM’s requirements for operators to submit an
16 application and specific information prior to receiving authority to frack also went beyond what
17 most states required, and BLM determined that this process was “necessary” to “mitigate
18 potential impacts.” *Id.* at 16,147. Also, most states lacked regulations to address “frack hits,” a
19 term for a fracking operation that causes an unplanned surge of pressurized fluid into another
20 well, often resulting in surface spills. *Id.* at 16,181-82. Moreover, the Fracking Rule
21 contemplated concurrent state regulation of wells on federal lands and in no way prevented states
22 from enacting stricter requirements. BLM estimated that compliance with the Fracking Rule was
23 expected to cost about \$11,400 per well, or approximately 0.13 to 0.21 percent of the cost of
24 drilling a well (an estimate that BLM has since lowered in its Final Repeal), but noted that such
25 costs may be overstated to the extent that the Fracking Rule’s provisions are already required by
26 state regulations or are consistent with the voluntary practice of operators. *Id.* at 16,130.

27 33. Despite the existence of state requirements, BLM explained in 2015 that “a major
28 impetus for a separate BLM rule is that states are not legally required to meet the stewardship

1 standards that apply to public lands and do not have trust responsibilities for Indian lands under
2 Federal laws.” 80 Fed. Reg. at 16,133; *see id.* at 16,154 (the Fracking Rule is “necessary to
3 enable the BLM to meet its statutory obligations to regulate operations associated with Federal
4 and Indian oil and gas leases; prevent unnecessary or undue degradation; and manage public
5 lands using the principles of multiple use and sustained yield; and protect resources associated
6 with Indian lands.”).

7 34. Shortly after the Fracking Rule was finalized, two industry groups, the states of
8 Wyoming, Colorado, North Dakota, and Utah, and the Ute Indian Tribe (collectively,
9 “Petitioners”) filed or intervened in lawsuits challenging the Rule in Federal District Court in
10 Wyoming. *See Independent Petroleum Association of America, et al. v. Jewell, et al.*, Case No.
11 2:15-CV-041-SWS (D. Wyo. petition filed Mar. 20, 2015); *State of Wyoming, et al. v. U.S. Dept.*
12 *of the Interior, et al.*, Case No. 2:15-CV-043-SWS (D. Wyo. petition filed Mar. 26, 2015).
13 Petitioners argued that BLM lacked the statutory authority to regulate fracking on federal and
14 Indian lands, and the District Court agreed in a merits decision issued on June 21, 2016, and set
15 aside the Fracking Rule. Appeals of this decision were taken by BLM and environmental
16 intervenors to the Tenth Circuit Court of Appeals, where the appeal remained pending during the
17 developments discussed below.

18 35. On March 28, 2017, President Donald Trump issued Executive Order 13783 entitled
19 “Promoting Energy Independence and Economic Growth.” 82 Fed. Reg. 16,093 (Mar. 31, 2017).
20 Section 7 of that Executive Order, entitled “Review of Regulations Related to United States Oil
21 and Gas Development,” specifically called on the Secretary of the Interior to review “for
22 consistency with the policy set forth in section 1 of this order and, if appropriate,” and “as soon as
23 practicable ... publish for notice and comment proposed rules suspending, revising, or
24 rescinding” the Fracking Rule.

25 36. The next day, Secretary of the Interior Ryan Zinke issued Secretarial Order 3349
26 entitled “American Energy Independence,” which claims to implement Executive Order 13783.
27 Section 5(c)(i) of the Secretarial Order provided that “BLM shall proceed expeditiously with
28

1 proposing to rescind the final rule entitled, ‘Oil and Gas; Hydraulic Fracturing on Federal and
2 Indian Lands,’ 80 Fed. Reg. 16128 (Mar. 26, 2015).”

3 37. BLM issued its Proposed Repeal on July 25, 2017. 82 Fed. Reg. 34,464. Citing to
4 Executive Order 13783 and Secretarial Order 3349, BLM stated that the Rule “unnecessarily
5 burdens industry with compliance costs and information requirements that are duplicative of
6 regulatory programs of many states and some tribes.” *Id.* at 34,464-65. Along with the Proposed
7 Repeal, BLM issued a Regulatory Impact Analysis finding that compliance with the Rule would
8 cost approximately \$9,690 per well, or about 0.1-0.2% of the cost of drilling a well. In addition,
9 BLM released a draft Environmental Assessment finding no significant environmental impacts
10 associated with the repeal of the Fracking Rule. On September 25, 2017, the State of California,
11 by and through Attorney General Xavier Becerra, submitted comments in opposition to the
12 Proposed Repeal.

13 38. On September 21, 2017, following the issuance of BLM’s Proposed Repeal, the
14 Tenth Circuit Court of Appeals dismissed the appeals of the District Court’s decision as
15 prudentially unripe and vacated the District Court’s June 21, 2016 judgment invalidating the
16 Fracking Rule. *See State of Wyoming v. Zinke*, 871 F.3d 1133 (10th Cir. 2017).

17 39. On December 29, 2017, BLM published the Final Repeal in the Federal Register. 82
18 Fed. Reg. 61,924. Citing to Executive Order 13783 and Secretarial Order 3349, BLM’s primary
19 justification is that the Final Repeal “is needed to prevent the unnecessarily burdensome and
20 unjustified administrative requirements and compliance costs of the 2015 rule from encumbering
21 oil and gas development on Federal and Indian lands.” *Id.* at 61,924-25. Moreover, BLM states
22 that “[t]his Administration’s policy is to increase revenues and to reduce reliance on imported oil
23 through this and other actions to reduce unnecessary burdens on energy industries, including oil
24 and gas on Federal and Indian lands. Thus, we are rescinding the 2015 rule.” *Id.* at 61,944.

25 40. Acknowledging that the Fracking Rule provided “additional assurance that operators
26 are conducting hydraulic fracturing operations in an environmentally sound and safe manner, and
27 increase[d] the public’s awareness and understanding of these operations,” BLM claims in the
28 Final Repeal that since promulgation of the 2015 Fracking Rule, “an additional 12 states have

1 introduced laws or regulations addressing hydraulic fracturing,” and “some tribes with oil and gas
2 resources have also taken steps to regulate oil and gas operations, including hydraulic fracturing,
3 on their lands.” *Id.* at 61,924-25. BLM also cites “several pre-existing regulations” and
4 “discretionary authority allowing it to impose site-specific protective measures” that will
5 allegedly enable it to reduce the risks associated with hydraulic fracturing. *Id.* at 61,926.
6 Furthermore, BLM claims that a review of incident reports from federal and Indian wells since
7 December 2014 “indicated that resource damage is unlikely to increase by rescinding the 2015
8 final rule because of the rarity of adverse environmental impacts that occurred from hydraulic
9 fracturing operations since promulgation of the 2015 rule.” *Id.* Thus, “BLM now believes that
10 the appropriate framework for mitigating these impacts exists through state regulations, through
11 tribal exercise of sovereignty, and through BLM’s own pre-existing regulations and authorities.”
12 *Id.*

13 41. On January 3, 2018, BLM released a “Regulatory Impact Analysis for the Final Rule
14 to Rescind the 2015 Hydraulic Fracturing Rule” (“Final RIA”). The Final RIA estimated that the
15 Final Repeal “would reduce compliance costs by up to about \$9,690 per well,” which “represents
16 about 0.1 – 0.2% of the costs of drilling a well.” Final RIA at 4, 53-54. This reduction “would be
17 just a small fraction of a percent of the profit margin for small companies, which is not a large
18 enough impact to be considered significant.” *Id.* at 62. The Final RIA also stated that the Final
19 Repeal “is unlikely to substantially alter the investment decision of firms and is unlikely to affect
20 the supply, distribution, or use of energy.” *Id.* at 59.

21 42. On January 3, 2018, BLM also released a final “Environmental Assessment,
22 Rescinding the 2015 Hydraulic Fracturing on Federal and Indian Lands Rule” (“Final EA”) as
23 well as a “Finding of No Significant Impact” (“FONSI”). The Final EA and FONSI contain only
24 a brief discussion of a few of the impacts of repealing the Fracking Rule related to ground water,
25 surface water, and greenhouse gases, which they determine to be insignificant. Final EA at 24-
26 37; FONSI at 48-52. These conclusions appear to be based on the assumptions that there would
27 be no change “in the number of hydraulic fracturing operations on Federal and Indian lands as a
28 result of implementing any of the four alternatives analyzed,” and that any potential impacts from

1 hydraulic fracturing would be addressed by state or tribal regulations, industry guidance, or
2 existing BLM requirements. Final EA at 24, 35. The Final EA offers only a superficial
3 comparison of the Fracking Rule and state regulations and shows that the Fracking Rule remains
4 more comprehensive than the requirements in many states, including with regard to:

- 5 • performance standards to ensure wellbore integrity;
- 6 • minimum storage tank requirements;
- 7 • baseline water testing; and
- 8 • measures to prevent frack hits.

9 *Id.* at Appendix 1. The Final EA also references industry guidance that could help mitigate the
10 risks associated with hydraulic fracturing, but notes that it has no data regarding compliance with
11 such guidance. *Id.* at 33-35.

12 **FIRST CAUSE OF ACTION**

13 **(Violation of the APA, 5 U.S.C. § 706)**

14 43. Paragraphs 1 through 42 are realleged and incorporated herein by reference.

15 44. An agency action is arbitrary and capricious under the APA where the agency (i) has
16 relied on factors which Congress has not intended it to consider; (ii) entirely failed to consider an
17 important aspect of the problem; (iii) offered an explanation for its decision that runs counter to
18 the evidence before the agency; or (iv) is so implausible that it could not be ascribed to a
19 difference of view or the product of agency expertise. *State Farm*, 463 U.S. at 43. Moreover, an
20 “agency changing its course by rescinding a rule is obligated to supply a reasoned analysis for the
21 change.” *State Farm*, 463 U.S. at 42. “[E]ven when reversing a policy after an election, an
22 agency may not simply discard prior factual findings without a reasoned explanation.” *Organized*
23 *Village of Kake v. U.S. Dept. of Agric.*, 795 F.3d 956, 968 (9th Cir. 2015). Moreover, an agency
24 cannot suspend a validly-promulgated rule without first “pursu[ing] available alternatives that
25 might have corrected the deficiencies in the program which the agency relied upon to justify the
26 suspension.” *Public Citizen v. Steed*, 733 F.2d 93, 103 (D.C. Cir. 1984).

27 45. Here, Defendants have failed to provide an explanation for the Final Repeal based on
28 the same factual record that was before the agency during the multi-year rulemaking proceeding

1 that resulted in the adoption of the Fracking Rule. Defendants entirely failed to consider how the
2 Final Repeal will achieve their statutory mandates to ensure that operations on federal leases are
3 conducted with “reasonable diligence, skill and care,” to protect “the interests of the United
4 States,” to safeguard “the public welfare” in federal mineral leases, to prevent unnecessary or
5 undue degradation of the lands, or to fulfill their statutory trust responsibilities on tribal lands.

6 46. Defendants’ stated justification of avoiding administrative burdens and compliance
7 costs for operators is contradicted by their own findings that these compliance costs represent just
8 a fraction of a percent of the profit margins for even the smallest operators and are otherwise
9 insignificant.

10 47. Defendants’ citation to Executive Order 13783 and Secretarial Order 3349 to justify
11 the Final Repeal is contradicted by their admissions that the Final Repeal will have almost no
12 impact on operator compliance costs or energy development on federal or Indian lands. Further,
13 these Orders cannot contravene statutory mandates imposed upon Defendants by Congress.

14 48. Defendants’ assertions that the potential impacts of hydraulic fracturing will be
15 addressed by state or tribal regulations is contradicted by their own superficial analysis of such
16 regulations, which shows that the Fracking Rule remains more comprehensive than the
17 regulations in many states, and their admission that many tribes have yet to promulgate regulatory
18 programs to address hydraulic fracturing. Defendants have also offered no reasoned explanation
19 as to how state or tribal requirements will enable them to meet the stewardship standards that
20 apply to federal lands or their trust responsibilities for Indian lands.

21 49. Defendants have failed to provide a reasoned explanation as to why their pre-existing
22 regulations and authorities, which were in existence at the time that it promulgated the Fracking
23 Rule, are now sufficient to address the risks posed by hydraulic fracturing.

24 50. Finally, Defendants failed to consider alternative solutions to address any alleged
25 deficiencies with the Fracking Rule, such as through the issuance of guidance or making
26 adjustments necessary to clarify certain provisions, rather than repealing the entire Fracking Rule.

27
28

1 51. Accordingly, Defendants acted in a manner that was arbitrary, capricious, an abuse of
2 discretion, not in accordance with law, and in excess of their statutory authority. 5 U.S.C. § 706.
3 Consequently, the Final Repeal should be held unlawful and set aside.

4 SECOND CAUSE OF ACTION

5 (Violation of the MLA, FLPMA, IMLA, and APA;

6 30 U.S.C. §§ 187, 189; 43 U.S.C. §§ 1701, 1732; 25 U.S.C. § 396d; 5 U.S.C. § 706)

7 52. Paragraphs 1 through 51 are realleged and incorporated herein by reference.

8 53. The MLA vests Defendants with broad responsibility to “prescribe necessary and
9 proper rules and regulations” to ensure that operations on federal leases are conducted with
10 “reasonable diligence, skill and care,” to protect “the interests of the United States,” and to
11 safeguard “the public welfare” in federal mineral leases. 30 U.S.C. §§ 187, 189.

12 54. FLPMA mandates that Defendants manage public lands “in a manner that will protect
13 the quality of ... ecological, environmental, air and atmospheric, [and] water resource ... values,”
14 43 U.S.C. § 1701(a)(8), and requires Defendants to take any action, by regulation or otherwise,
15 “necessary to prevent unnecessary or undue degradation of the lands.” *Id.* § 1732(b).

16 55. The IMLA provides Defendants with a trust responsibility to ensure that “[a]ll
17 operations under any oil, gas, or other mineral lease issued pursuant to the terms of [the IMLA] or
18 any other Act affecting restricted Indian lands shall be subject to the rules and regulations
19 promulgated by the Secretary of the Interior.” 25 U.S.C. § 396d.

20 56. When an agency rescinds a prior regulation, it is required to demonstrate “that the
21 new policy is permissible under the statute” and that “that there are good reasons for it.” *F.C.C.*
22 *v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009).

23 57. In promulgating the Final Repeal, Defendants entirely failed to consider or fulfill
24 their statutory mandates to protect the interests of the United States and safeguard the public
25 welfare or otherwise ensure the environmentally responsible development of oil and gas on public
26 lands, or their statutory trust responsibilities for Indian lands.

27 58. Accordingly, Defendants acted in a manner that was arbitrary, capricious, an abuse of
28 discretion, not in accordance with law, and in excess of their statutory authority, in violation of

1 the MLA, FLPMA, IMLA, and APA. 30 U.S.C. §§ 187, 189; 43 U.S.C. §§ 1701, 1732; 25
2 U.S.C. § 396d; 5 U.S.C. § 706. Consequently, the Final Repeal should be held unlawful and set
3 aside.

4 **THIRD CAUSE OF ACTION**

5 **(Violation of NEPA and the APA;**

6 **42 U.S.C. § 4332(2)(C); 40 C.F.R. § 1502.3; 5 U.S.C. § 706)**

7 59. Paragraphs 1 through 58 are re-alleged and incorporated herein by reference.

8 60. NEPA requires federal agencies to take a “hard look” at the environmental
9 consequences of a proposed activity before taking action. *See* 42 U.S.C. § 4332. To achieve this
10 purpose, a federal agency must prepare an EIS for all “major Federal actions significantly
11 affecting the quality of the human environment.” *Id.* § 4332(2)(C); 40 C.F.R. § 1502.3. To
12 determine whether a federal action will result in significant environmental impacts, the federal
13 agency may first conduct an EA. 40 C.F.R. §§ 1501.4, 1508.9. An EA must include a discussion
14 of the need for the proposal, alternatives to the proposed action, the environmental impacts of the
15 proposed action and alternatives, and must provide “sufficient evidence and analysis for
16 determining whether to prepare” an EIS or a FONSI. *Id.* § 1508.9.

17 61. NEPA’s implementing regulations specify several factors that an agency must
18 consider in determining whether an action may significantly affect the environment, thus
19 warranting the preparation of an EIS. 40 C.F.R. § 1508.27. The presence of any single
20 significance factor can require the preparation of an EIS. “The agency must prepare an EIS if
21 substantial questions are raised as to whether a project may cause significant environmental
22 impacts.” *Friends of the Wild Swan v. Weber*, 767 F.3d 936, 946 (9th Cir. 2014).

23 62. As the comment letters from Plaintiff and others demonstrate, there are substantial
24 questions, if not certainties, as to whether the Final Repeal may have significant environmental
25 impacts. In particular, the Final Repeal will result in significant adverse impacts including
26 increased air pollution and related public health impacts, climate change harms, impacts to
27 endangered, threatened, or rare species, and induced seismicity from the discharge of waste water
28 in disposal wells. These potential impacts, as well as many of the significance factors that NEPA

1 requires an agency to consider, including impacts to public health and safety, the degree to which
2 effects are likely to be highly controversial, and the degree to which potential effects are highly
3 uncertain or involve unique or unknown risks, were not addressed or even mentioned by
4 Defendants in the Final EA and FONSI.

5 63. Moreover, Defendants' assertions that the potential impacts of hydraulic fracking will
6 be addressed by state or tribal regulations is contradicted by their own superficial analysis of such
7 regulations, which shows that the Fracking Rule remains more comprehensive than the
8 regulations in many states, and their admission that many tribes have yet to promulgate regulatory
9 programs to address hydraulic fracturing. In addition, Defendants' reliance on industry guidance
10 or best practices to mitigate potential risks is contradicted by Defendants' admission that they
11 have *no data* on industry's compliance with such measures.

12 64. Finally, Defendants' contention that the reduction in compliance costs associated with
13 the Final Repeal "appear to be an appropriate tradeoff for any potential lessening of the
14 assurances" that "operators conduct hydraulic fracturing in an environmentally sound and safe
15 manner; reduce the potential risks to surface and groundwater resources; and increase public
16 awareness and understanding of these operations," is irrelevant to the agency's consideration of
17 environmental impacts and does not provide the analysis required by NEPA.

18 65. Defendants' determination that the Final Repeal would result in no significant
19 impacts, and its reliance on a FONSI and failure to prepare an EIS, constitutes agency action
20 unlawfully or unreasonably withheld or delayed, in violation of the requirements of NEPA.
21 5 U.S.C. § 706(1). Alternatively, Defendants' determination that the Final Repeal would result in
22 no significant impacts, and its reliance on a FONSI and failure to prepare an EIS, is arbitrary and
23 capricious, an abuse of discretion, and contrary to the requirements of NEPA. 5 U.S.C. § 706(2).

24 **PRAYER FOR RELIEF**

25 WHEREFORE, Plaintiff respectfully requests that this Court:

26 1. Issue a declaratory judgment that Defendants acted arbitrarily, capriciously, contrary
27 to law, abused their discretion, and failed to follow the procedure required by law in their
28 promulgation of the Final Repeal, in violation of the MLA, FLPMA, IMLA, NEPA, and APA;
